Adjusting price on products with automatic renewal

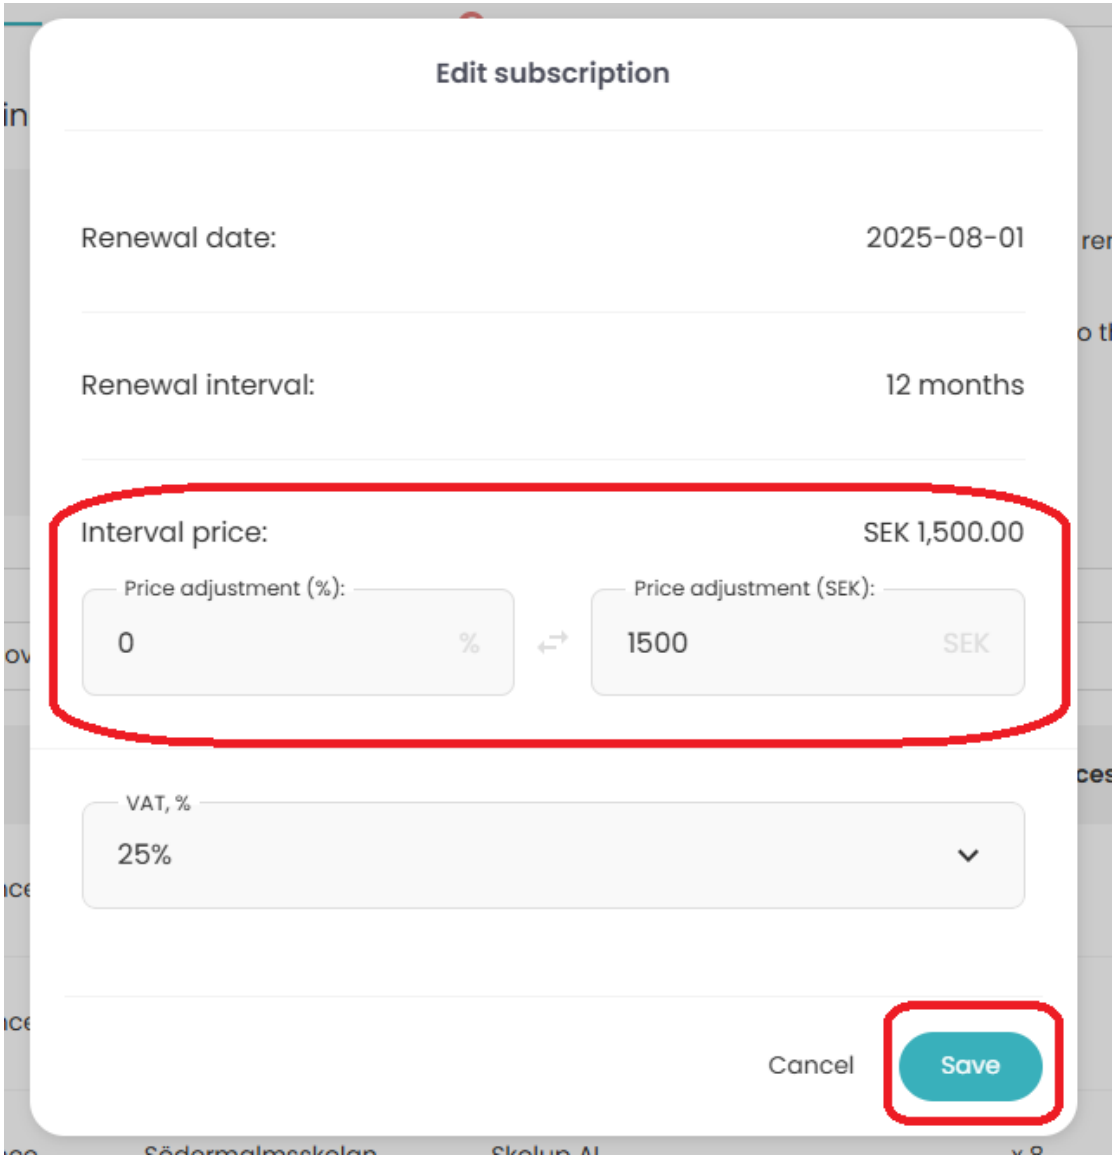

Ulf Kronsell - 2025-04-09 - Subscriptions

If you want to update the price for a product with automatic renewal for the coming subscription period you need to update the subscriptions related to that product. If, for example, you want to adjust the price for year 2, you need to go through the steps below. This is **essential** to make sure the amount on the invoice is correct. **NOTE!** This should be done in good time before the renewal date.

1. Under **License managment**, click **Subscriptions** and search for the desired subscriptions, alternatively use the **Filter** button and filter on organisations/schools or tools to find the subscription you want to edit. For that subscription, click **Edit**.

2. Enter the new price for the coming renewal period either as an amount **or** as a percentage. Click **Save**.

3. To update multiple subscription at once, see Update price on multiple subscriptions with an index (percentage)

NOTE! When you update the price it will be visible to the customer in their subscription view.
